T-IXMPHOCYTES AS WELL AS IXMPHOID AND MONIXMPHOLOGIAN OF THE MULTICOMPONENT AND MONIXMPHOLOGIALS.

T-IXMPHOCYTES AS WELL AS IXMPHOID AND MONIXMPHOID CELLS.

THAT CONSISTS OF AT LEAST TWO COMPONENTS, A PRE-EXISTING CYTOPLASMIC COMPONENT NEATC 2 AND AN INDUCIBLE NUCLEAR COMPONENT NEATC1. OTHER MEMBERS SUCH AS NEATC4, NEATC3 OR MEMBERS OF THE COMPLEX. NEATC PROTEINS BIND TO DNA AS MOOMERS.

THE COMPLEX. NEATC PROTEINS BIND TO DNA AS MOOMERS.

-1- SUBCELLULAR LOCATION: CYTOPLASMIC FOR THE PHOSPHORYLATED FORM AND NUCLEAR EXIT OF NEATC IS THOUGHT TO BE ONE MECHANISM BY WHICH CELLS DISTINGUISH BETWEEN SUSTAINED AND TRANSIENT CALCIUM SIGNALS. THE SUBCELLULAR LOCALIZATION OF NEATC PLAY A KEY ROLE IN THE GENE TRANSCRIPTION.

ALPHA, B-BETA, C-ALPHA (SHOWN HERE) AND C-BETA; ARE PRODUCED BY ALTERNATIVE PRODUCES: AT LEAST 6 ISOFORMS; A ALPHA, A-BETA, B-ALPHA, B-BETA, C-ALPHA (SHOWN HERE) AND TIONAL ISOFORMS PRODUCED BY ALTERNATIVE INITIATION AT MET-37 OF ISOFORMS ALPHA. NEATC/C IS THE STRONGEST ACTIVATOR OF GENE TRANSCRIPTION, FOLLOWED BY ALTERNATIVE INITIATION AT MET-37 OF ISOFORMS ALPHA. NEATC/C. BOTH PRESENT IN T-CELLS CAN MODULATE THEIR TRANSCRIPTIONAL ACTIVITY.

-1- TISSUE SPECIFICITY: EXPRESSED IN THYMUS, PERLIPHERAL LEUKOCYTES AS T-CELLS (THYMUS AND PERLIPHERAL LEUKOCYTES AS NEATC/B AND NEATC/C ARE PREFERENTIALLY EXPRESSED IN NATUE T-CELLS (STRUBE EXPRESSED IN NAIVE T-CELLS AFTER FIRST ANTIGEN EXPOSURE AND ISOFORM A IS EXPRESSED IN NAIVE T-CELLS AFTER FIRST ANTIGEN EXPOSURE AND ISOFORM A IS EXPRESSED IN EFFECTOR T-CELLS AFTER EXPOSURE AND EXPOSURE AND ISOFORM A IS EXPRESSED IN EFFECTOR T-CELLS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Crabtree G.R.;

INDUCED AFTER CO-ADDITION OF PHORBOL 12-MYRISTATE 13-ACETATE (PMA) AND IONOMYCIN. ALSO INDUCED AFTER CO-ADDITION OF 12-O-TETRADECANOYLPHORBOL-13-ACETATE (TPA) AND IONOMYCIN. WEAKLY INDUCED WITH PMA, IONOMYCIN AND CYCLOSPORIN A.

--- IDOMAIN: REL SIMILARITY DOMAIN (RSD) ALLOWS DNA-BINDING AND COOPERATIVE INTERACTIONS WITH API FACTORS
--- I-- DOMAIN: THE N-TERMINAL TRANSACTIVATION DOMAIN (TAD-A) BINDS TO AND IS ACTIVATED BY CBB/P300. THE DEPHOSPHORYLATED FORM CONTAINS TWO UNMASKED NUCLEAR LOCALIZATION SIGNALE (NLS), WHICH ALLOW TRANSLOCATION OF THE PROTEIN TO THE NUCLEUS.
--- I-- DOMAIN: NEATC/C HAS A C-TERMINAL PART WITH AN ADDITIONAL TRANSACTIVATION DOMAIN, TAD-B, WHICH ACTS AS A TRANSCRIPTIONAL PART WITHOUT COMPLETE TAD-B WHICH ACTS AS A TRANSCRIPTIONAL REPRESSOR.

--- PTM: PHOSPHORYLATED BY NEATC-KINASE; DEPHOSPHORYLATED BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of an immunogenic polypeptide comprising amino acids 332-371 of human prostate-specific PSI18 polypeptide (see AMA50809). A PSI18 consensus sequence (see ABA91651) is found at least 12 times more often in prostate than in non-prostate tissue. PSI18 polypeptides, polynucleotides, antibodies, agonists and inhibitors are useful for detecting, it reating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostaticis, prostatic intrappithalial neoplasia, prostate cancer, tumours and metastases. The PSI18 polypeptides can be produced by expression of PSI18 polynucleotides in transfected host cells, and intrappithalial neoplasia prostate cancer is antibodies of diagnostic use. The methods and reagents of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The clones were identified from a cDNA library made from prostate tumour tissue. Recombinant PS118 protein is used to detect PS118-specific antibodies, to raise antibodies for detection of PS118 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PS118 protein or nucleic acid, which are prostate related, and altered or elevated in prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of prostatic disease, particularly cancer, and to identify subjects at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of a human prostate-specific PS118 CC polypeptide, as predicted from a partial consensus cDNA sequence (see ABA91651), and lacking the N-terminal region. The PS118 CC consensus sequence is found at least 12 times more often in prostate than in non-prostate tissue. PS118 polypeptides, including derivatives of the present sequence, polynucleotides, contibodies, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostatic intraepithelial neoplasia, prostate cancer, tumours and metastases. The PS118 polypeptides can be produced by expression of PS118 polypucleotides in transfected host cells. The methods and reagents of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers without the use of surgery.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              £XXXQSSSSSSSSSSSSSSSSSSSSSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc polynucleotides are also used in diagnostics as expressed sequence tags cfor identifying expressed genes. (I) is useful in gene therapy techniques ct to restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or creating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical cmaning of sittes expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences. ABGO0010-ABG30377 represent novel human conditions and activities of the invention.

                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide (II) sequences. (I) is useful as hybridisation polymerase chain reaction (PCR) primers, oligomers, and for and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIFO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antisense inhibitors of genes essential to correct products of cellular proliferation, their use in identifying the company, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The color in the interior is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. CC and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation for the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                         This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also used for the production of antibodies. The products can also be used for
                                                                                                                                                                                             New isolated Helicobacter polynucleotides - for the diagnosis, prevention and treatment infections and gastrointestinal diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GHPO protein; Helicobacter infection; gastroduodenal disease; gastritis peptic ulcer disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    H. pylori
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (antigens) and nucleic acids encoding them. The proteins of the invention are involved in egg-sperm binding and fusion. They are useful as immunogens in vaccine preparation for modulating fertility. In particular, the proteins are useful for producing antibodies which are useful for temporary, reversible contraception methods. The contraceptive vaccine is especially useful for controlling fertility in human beings or agriculturally important livestock, cattle or pig. The invention also relates to the use of
                                                                                                                                                                     Claim 8; Page 571-573; 2054pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 9
                                    The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen CC promologous nucleic acids which are required for cell proliferation in CC a wide variety of organisms. The present sequence represents an CC assential prokaryotic cellular proliferation protein.

CC Note: The sequence data for this pattent did not form part CC format directly from WIPO at
